<b>Appendix 1.2</b> <i>(Reference : Paragraph 1.2; Page 3)</i> <b>Glossary of terms used in the performance audit</b>		
<b>Sr No.</b>	<b>Acronym</b>	<b>Meaning</b>
<b>1</b>	<b>2</b>	<b>3</b>
1.	Article 371 (2) of the Constitution Of India	(2) Notwithstanding anything in this Constitution, the President may by order made with respect to the State of Maharashtra or Gujarat, provide for any special responsibility of the Governor for: (a) the establishment of separate development boards for Vidarbha, Marathwada, and the rest of Maharashtra or, as the case may be, Saurashtra, Kutch and the rest of these boards will be placed each year before the State Legislative Assembly; (b) the equitable allocation of funds for developmental expenditure over the said areas, subject to the requirements of the State as a whole.
2.	Aquaduct	Where the bed level of the canal is higher than the high flood level of the drainage then the cross drainage work is called aqueduct. When irrigation channels have to cross streams or drains in an uneven country the works necessary to dispose of these drains are called cross drainage works.
3.	Backlog	Backlog refers to the regional disparity in the three regions of the State viz. Vidarbha, Marathwada and Rest of Maharashtra. Nine sectors like irrigation, roads, rural electrification etc. were chosen for estimation of backlog. As per the Indicators and Backlog Committee appointed (1995) by the Hon'ble Governor, percentage of created IP in the State <i>vis-à-vis</i> the net sown area was 35.11 <i>per cent</i> . Districts with created IP less than 35.11 <i>per cent</i> were considered as backlog districts.
4.	Colgrout masonry	Colgrout masonry is a new technique for construction of masonry for massive structures like gravity dams, weirs, barrage, foundation, retaining walls etc which satisfies the requirement of strength, durability and at the same time being impervious and particularly suitable for water retaining structures in Indian conditions.
5.	Command Area Development	Envisages execution of on-farm development works like field channels, land levelling, field drains and conjunctive use of ground and surface water; the introduction of Warabandi, or the rotational system of water distribution to ensure equitable and timely supply of water to each holding; and evolving and propagating crop patterns and water management practices appropriate to each command area.
6.	Cross drain	Cross drain is a drain to collect seepage from the longitudinal drain and to collect it in the toe drain.
7.	Culturable/Cultivable Command Area	The area which can be physically irrigated from a Scheme and is fit for cultivation by a canal system or by lift.
8.	Cut-off trench	An excavation in the base of a dam or other structure filled with relatively impervious material to reduce percolation.
9.	Dead storage capacity	The portion of a water storage capacity that is equal to the volume of water below the level of the lowest outlet (the minimum supply level). This water cannot be accessed under normal operating conditions.

<b>Appendix 1.2 (contd.)</b>		
<b>1</b>	<b>2</b>	<b>3</b>
<b>10.</b>	Downstream of dam	An area down the dam built.
<b>11.</b>	Drip irrigation	Drip irrigation system delivers water to the crop using a network of mainlines, sub-mains and lateral lines with emission points spaced along their lengths. Each dripper/emitter, orifice supplies a measured, precisely controlled uniform application of water, nutrients, and other required growth substances directly into the root zone of the plant.
<b>12.</b>	Field Channels	Small channels which receive water through outlets fixed in the banks of distributaries or minors to the field.
<b>13.</b>	Gorge filling	Filling the river portion of dam embankment.
<b>14.</b>	Gross Command Area	The total area covered by an irrigation project including uncultivable area under habitation, roads, tanks, waste land, forest land etc.
<b>15.</b>	Gross cropped area	Gross cropped area is the sum of net sown area and the area sown more than once in an agricultural year.
<b>16.</b>	Guide bunds	Provided for the purpose of guiding the river flow pass the diversion structure without causing damage to it and its approaches.
<b>17.</b>	Head regulator	Construction at the off-take of a channel subsidiary to a main canal. Piers with grooves are provided for the use of shutters to regulate the water flow for distribution.
<b>18.</b>	Head work	The works constructed at the off take of a main canal from the river; includes the weir on the river, the dam at the storage site etc.
<b>19.</b>	Hearting and casing	A zone of impervious earth within a zoned earthen or rock fill dam while casing zone is the outer side of hearting zone placed with pervious soils so as to protect the hearting zone.
<b>20.</b>	Hot weather	The hot weather season commences from March 1 to June 30.
<b>21.</b>	Inverted plum bobs	Used to measure the relative displacement between the dam bottom and the foundation base rock.
<b>22.</b>	Irrigable Command Area	It is the part of CCA which can be irrigated by the canal system less the area which cannot be irrigated because of high elevation.
<b>23.</b>	Irrigation Potential created	The total gross area proposed to be irrigated under different crops during a year by a scheme. The area proposed to be irrigated under more than one crop during the same year is counted as many times as the number of crops grown and irrigated.
<b>24.</b>	Irrigation Potential projected	The irrigation potential planned to be created on completion of an irrigation project.
<b>25.</b>	Irrigation Potential utilised	The gross area actually irrigated during reference year out of the proposed gross area to be irrigated during the year.
<b>26.</b>	Kharif	The Kharif season commences from July 1 to October 14. Paddy and groundnut are examples of Kharif crops.
<b>27.</b>	K T Weir	Kolhapur-type weir is a low level dam built across a stream for storage of water.
<b>28.</b>	Lift Irrigation Scheme (LIS)	A type of irrigation in which irrigation is provided through water raised by pumps.

**Appendix 1.2 (contd.)**

1	2	3
<b>29.</b>	List I	The Seventh Schedule (under Article 246) of the Constitution of India provides a Union list termed as List I. Entry 56 of List I provides that “Regulation and development of inter-State rivers and river valleys to the extent to which such regulation and development under the control of the Union is declared by Parliament by law to be expedient in the public interest”.
<b>30.</b>	List II	The Seventh Schedule (under Article 246) of the Constitution of India provides a State list termed as List II. Entry 17 under List II of Seventh Schedule provides that “Water, that is to say, water supplies, irrigation and canals, drainage and embankments, water storage and water power subject to the provisions of Entry 56 of List I”.
<b>31.</b>	List III	The Seventh Schedule (under Article 246) of the Constitution of India provides a Concurrent list termed as List III.
<b>32.</b>	Live storage capacity	Live storage capacity means the reservoir capacity excluding the dead storage capacity.
<b>33.</b>	Major project	Having culturable command area above 10,000 ha.
<b>34.</b>	Medium project	Having culturable command area above 2,000 ha and up to 10,000 ha.
<b>35.</b>	Micro irrigation	Micro irrigation is a system of tubes and drippers which deliver water directly to the base of each plant or crop to use water with much greater efficiency than that provided by conventional sprinkler systems.
<b>36.</b>	Minor	A branch of distributary of any canal.
<b>37.</b>	Minor project	Projects having irrigable command area from 251 ha to 2,000 ha.
<b>38.</b>	Net Present Value	The discounted sum of ecosystem goods and services that would flow from a forest over a period of time net of costs incurred. In the context of diversion of forests land to non-forestry, NPV means that the loss of value of the forest resources to the stakeholders or the users at the time of diversion of forest land.
<b>39.</b>	Net Sown Area	It is the total area sown with crops. Area sown more than once is counted only once.
<b>40.</b>	Outlet	An opening of a capacity not exceeding 30 litres per second to serve a block of land of approximately 40 hectares through which water is delivered into a field-channel or directly into any land.
<b>41.</b>	Perennial crops	Perennial crops are planted once and live for years producing many consecutive harvests.
<b>42.</b>	Plumb bobs	Used to measure relative displacement between two reference points of a dam structure.
<b>43.</b>	Quarry spual	Small chips of stones available from quarry at the time of blasting for rubble.
<b>44.</b>	Rabi	The rabi season commences from October 15 to February 28/29. Jowar and Wheat are examples of Rabi crops.
<b>45.</b>	SRE	Standard Rabi Equivalent - water required for an area having different crops against water required for equivalent area of Jowar crop in Rabi season.
<b>46.</b>	Reservoir	A body of water collected and stored behind a dam.

Appendix 1.2 (concl.)		
1	2	3
47.	Raising main	It is a structure used to raise or lift water from reservoir/canal with the help of pumping machinery in a lift irrigation system.
48.	Rock toe	Junction of the upstream or downstream face of an embankment with ground surface.
49.	Saddle dam	An auxiliary dam constructed to confine the reservoir created by a primary dam either to permit higher water elevation and storage or to limit the extent of reservoir for increased efficiency.
50.	Shaft Rod	A rotating rod which through its motion operates the gate of head regulator.
51.	Sluice Gates	A barrier sliding in grooves that are set in the sides of the waterways, to allow the water flow under it.
52.	Spillway	A passage for the flow of surplus or waste water in a weir or conduit.
53.	Stone pitching	It is a protection provided for the embankment slopes against erosion by waves of water or rain water.
54.	Tail channel	End portion of a channel.
55.	Toe drain	A trench with filter material laid along the downstream toe of the dam to collect seepage from horizontal filter or inner cross drains and take it to natural drain.
56.	Trough	A bridge on the canal for passage of water.
57.	Upstream	An area above the dam built.
58.	Waste Weir	Channels used to dispose of excess water from the channel.

**Note 1:** Selection of projects in respect of KIDC was done excluding the projects covered in the performance audit included in the C&AG Report of 2009-10.

**Note 2:** Nardave and Kondhane projects under KIDC and Chillewadi under MKVDC were selected on risk assessment.

<p style="text-align: center;"><b>Appendix 2.1</b> <i>(Reference :Paragraph 2.5; Page 15)</i> <b>Extract of 34<sup>th</sup> Governing Council meeting dated 11 June 2003</b></p>		
<b>Priority No.</b>	<b>Principle for prioritization and project names under the category</b>	
1	<b>Category A</b>	Those major & medium projects which are in advanced stages and on which with comparatively less expenditure, considerable storage capacity could be created and those projects the execution of which is mandatory from safety angle. (Urmodi, Tarli, Sina Kolegaon, Dhom Balkewadi, Nira Deoghar, Gunjawani, Bhama Askhed major projects and such ongoing medium projects).
2	<b>Category B 1</b>	The ongoing projects in which dam work have been completed and on which with comparatively less expenditure on the ongoing canals and distributary works, considerable IP can be created (namely Kukdi, Bhima, Chaskaman, Krishna) were proposed for funding under Central funds.
3	<b>Category C 1</b>	Those LIS in respect of which major expenditure has been incurred and on which expenditure incurred was intended to provide irrigation benefits in scarcity/drought prone areas. (Takari, Mhaisal, Tembhoo, Janai Shirsa, Purandar, Sina Madha).
4	<b>Category B 2</b>	Those LIS on which major expenditure has not been incurred and where it is possible to postpone the works (Jihe kathapur, Barshi, Ekrugh, Ashti, Shirapur, Dahigaon, Wakurde, Krishan stage II, Sina Mahekari, Anala & Shirala etc.).
5	<b>Category B 2</b>	Such ongoing projects and projects whose dam works have been completed and the works of canals and distributaries can be postponed (Dudhganga, Warna, Bhima-Sina extension canal).

<b>C</b>	projects affected due to change in scope of work
<b>D</b>	projects affected due to PAP problems
<b>E</b>	projects affected due to non acquisition of forest land

Completed projects	land not acquired	EC Not obtained	Forest clearance pending
Source: Information furnished by the IDCs			
Note : As reported by the Department, survey was carried out for all the projects			

<b>Appendix 3.2</b> <i>(Reference: Paragraph 3.2.1; Page 26)</i> <b>Statement showing test-checked projects where ECs were not obtained or EC conditions were not fulfilled</b>		
	<b>Name of Project / CCA /Date of AA</b>	<b>Audit findings</b>
<b>I Projects where ECs were not obtained</b>		
<b>KIDC</b>		
1.	Surya/27,188/January 1974	Compliance to GoI's observations raised (November 1993) with regard to EC was made only in September 2002 i.e., after nine years. EC was pending (July 2013).
2.	Nardave /10,105/July 1989	The work on the dam started in February 2001 with CCA of 9,424 ha, which was increased to 12,530 ha as per third RAA accorded in July 2007. The EC required as per EIA notification of 2006 was not obtained.
3.	Virdi /1,508/September 2005	Work order for construction of dam and allied works was issued in April 2007 i.e. after EIA notification of September 2006. However, EC was not obtained.
4.	Kondane /240/May 2011	Work commenced (July 2011) without EC.
<b>MKVDC</b>		
5	Janai Shirsai LIS /19,712/ November 1993	The AA for the project was accorded by GoM in November 1993 and the first RAA accorded in December 2004. The irrigation potential under the scheme was 14,080 ha. The Division Authority submitted (September 2010) a proposal for EC to SEAC since the project covered about 15.88 ha of forest land and the right bank canal of the project also passed through the Mayureshwar Wild Life Sanctuary. EC was pending.
6.	Chaskaman /55,214/December 1973	The scope of the project was increased (July 2003) by increasing the irrigation potential from 29,200 ha to 44,170 ha which required EC from the GoI. Government stated (July 2013) that EC was not necessary as the note indicating the increase in the command area from 29,200 ha to 44,170 ha was approved in July 1993 before the EIA notification of 1994 and accordingly, attached a copy of the note. Reply is not tenable as the said approval was only for incurring expenditure over the AA and there was no mention of the increase in the command area.
<b>VIDC</b>		
7.	Katepurna Barrage/4,356/31.8.2007	EC awaited.
8.	Lower Dhyanganga/1,476/12.2.2009	Proposal submitted on 25.2.2013; clearance awaited.
9.	Januna/664/8.7.2007	Proposal yet to be submitted.
10.	Pangrabandi/1,548/27.2.09	Proposal yet to be submitted.
11.	Warajahangir/1,790/30.1.09	Proposal yet to be submitted.
12.	Sukli/523/18.7.07	Proposal submitted for EC in July 2008. EC was awaited.
13.	Lower Wardha/78,873/9.1.1981	As per the third RAA (August 2006) the irrigation potential of the project was increased by 12,407 ha. However, extension work was started without EC as per EIA notification of September 2006.
<b>TIDC</b>		
14	Kurha Vadhoda LIS/25,898/ 6.7.1999	EIA study report forwarded to MoEF in April 2011. EC under process.
<b>GMIDC</b>		
15.	Shankararaoji Chavan Vishunupuri Project, Phase II/26,523/May 1979	Proposal for EC for RAA was under process.

Appendix 3.2 (concl.)		
Name of Project / CCA /Date of AA		Audit findings
<b>II Non fulfillment of EC conditions</b>		
1.	Tarali Irrigation Project/18,131/Fbruary 1996 (MKVDC)	The project received EC in July 2004. As per specific condition, Catchment Area Treatment (CAT) Plan consisting of biological measures <sup>169</sup> and engineering measures <sup>170</sup> was to be completed in three years. However, the plan was yet to be implemented for want of funds (March 2013).
2.	Urmudi Irrigation Project/37,000/ October 1993 (MKVDC)	The project received EC in February 2005. As per specific condition of the EC, CAT Plan was to be completed in three years. However, the CAT Plan was not implemented. Further, the rehabilitation of PAPs as required under special condition of the EC was not completed as of March 2012.
3.	Tembu LIS/1,49,631/ February 1996 (MKVDC)	The EC was obtained in August 2007 which stipulated that a multi-disciplinary Committee in consultation with the MoEF should be constituted with ecologists, environmental Scientists and experience administrators to oversee the effective implementation of the suggested safeguard measures like compensatory afforestation programme. Government stated (July 2013) that the multi-disciplinary Committee was formed in June 2008 but details of actual safeguard measures suggested and the minutes of meetings of the Committee called for in audit were awaited (November 2013).
4.	Waghur/26,325/6.1.1976 (TIDC)	EC received in October 2006. Compliance of conditions of EC was in progress.
5.	Punad/12,662/29.5.1981 (TIDC)	EC received in December 1993. Compliance of conditions was in progress.
6.	Upper Wardha/83,300/13.2.1965 (VIDC)	Sixteen out of 17 conditions have been complied with.

---

<sup>169</sup> Biological measures include repairs of farm bunds, terrace bund improvement, planting in farm bund, reforestation and afforestation

<sup>170</sup> Engineering measures include gully plugging, loose boulder shoulder, gabian bandhara and cement nulla bund

<p style="text-align: center;"><b>Appendix 3.3</b> <i>(Reference: Paragraph 3.2.2; Page 28)</i></p> <p style="text-align: center;"><b>Statement showing increase in cost due to delay in payment of afforestation charges</b></p>	
<b>Name of the IDC</b>	<b>Audit Findings</b>
KIDC	<p>Forest Department intimated (July 2009) WRD to pay ₹ 76.04 crore for transfer of forest land (681.589 ha) required for Mumari dam and Bhatsa left bank canal and right bank canal. The charges were however, paid after three years in July 2012. In the meanwhile, the Forest Department intimated (June 2013) the revised NPV and allied charges of ₹ 104.94 crore. The delay in payment thus, resulted in increase in cost of acquisition of forest land by ₹ 28.90 crore.</p> <p>Forest Department granted (2001) in-principle approval for acquisition of forest land of 33.0513 ha for construction of canals for Hetawne medium irrigation project. The Deputy Conservator of Forests, (DCF) Alibag demanded (April and November 2001) an amount of ₹ 51.93 lakh (₹ 22.94 lakh for compensatory afforestation, survey, demarcation and ₹ 28.99 lakh towards plantation on the both sides of canal, tree cutting, drip irrigation). The WRD however, paid the entire amount of ₹ 51.93 lakh only by March 2004. In the meanwhile, GoI issued order for recovery of NPV in all the forest clearance cases in which final approval was accorded after 29 October 2002. Accordingly, the DCF demanded (May 2010) an additional amount of ₹ 3.10 crore as NPV which was not paid even as of July 2013. Thus, delay of three years in payment of ₹ 51.93 lakh for obtaining final approval resulted in increased levy of NPV of ₹ 3.10 crore.</p>

14	Korle-Satandi	Dam work	January 2002	January 2006	Improper survey	Dam site was shifted upstream to acquire forest land of one ha instead of initially planned 4.36 ha, decrease in dam height etc.	
15	Virdi Minor Project	Dam work	April 2007	April 2011	Improper survey	Subsequent change of site, height of dam of etc. due to the demands of stakeholders.	

<b>Appendix 3.5</b> <i>(Reference: Paragraph 3.2.8; Page 42)</i> <b>Inadequacies in preparation of estimates</b>				
			(in ₹ crore)	
Name of IDC and name of the project	Name of work (name of the agency)	Inadequacies in preparation of estimates		Amount involved
MKVDC  (Tarli major irrigation project)	Construction of Koparde Approach Canal Km 0 to 32 (Prasad & Co)	Labour Welfare Cess <sup>171</sup> (LWC) of one <i>per cent</i> was included and technical sanction was accorded (April 2012) by CE, Special Project, WRD for additional and extra works though the original agreement was finalised before 1 July 2010. Government accepted (July 2013) the observation and stated that the amount would be deducted from the contractor's bills.		2.24
KIDC  (Korle-Satandi medium irrigation project)	Construction of dam (M/s Noble India, Jaipur)	Cofferdam <sup>172</sup> is required to be constructed during gorge filling. However, since the cofferdam was not included in the original estimates, the same was awarded (October 2009) to the contractor as an extra item for ₹ 73.83 lakh resulting in extra expenditure due to higher EIRL compared to the rates at the time of calling (October-November 2001) of tender. Government stated (July 2013) that in the original project report gorge filling was to be done in two stages but as per the site condition and as suggested by CDO, Nashik the gorge filling was required to be completed in one season. The reply indicates inadequacies in preparation of estimates.		0.74
GMIDC	17 <sup>173</sup> Barrage works	Estimates of major/medium projects involving manufacture and erection of gates of barrages revealed that the item rates were framed by the project authorities including Central Excise duty <sup>174</sup> (CED) and Service Tax <sup>175</sup> though they were exempt. Further, WRD neither ensured payment of these duties and taxes to the Central Excise Department nor recovered the same from the contractors. Government stated (July 2013) that while framing the estimates it was presumed that the components would be manufactured/fabricated at workshop rather than at work site. But the contractors decided to establish workshop at site only. It further stated that cost of establishing workshop at sites requires capital expenditure and recurring expenditure which was not included in the estimates. The reply is not acceptable as the contractors had carried out fabrication works at the dam site and were entitled to CED exemption. Therefore, loading of CED in the estimates was incorrect. Further, GMIDC had already factored in the workshop charges in addition to overhead charges at 10 <i>per cent</i> . No comments were offered on service tax exemption.		30.22
				<b>33.20</b>

<sup>171</sup> As per the GR (17 June 2010), Labour Welfare Cess at one *per cent* of the cost of work should be recovered from those contractors whose agreements were finalised on and after 1 July 2010

<sup>172</sup> A temporary enclosure built within a water body for creating a dry work area

<sup>173</sup> Tarugavan, Dhalegaon, Mudgal, Muli, Sai, Shivani, Lasra, Somanthali, Ghatne, Babhli, Balegaon, Amdura, Digras, Mangrul, Apegaon, Hiradpuri and Waki

<sup>174</sup> Structures and parts of structures of iron and steel fabricated at site of work for use in construction are exempt from payment of duty vide Notification dated 24 February 2005 as amended

<sup>175</sup> Service tax is exempt from construction services of dam as it is excluded from the definition of construction services as per Section 65 (25b) of the Finance Act, 1994

**Appendix 3.6**  
*(Reference: Paragraph 3.3.1; Page 47)*  
**Contracts awarded without inviting tenders**

Sr. No.	Name of project	Name of the contractor	Nature of original work	Type of work awarded without inviting tender	Amount in (₹ crore)	Government reply (July 2013)
1.	2.	3.	4.	5.	6.	7.
1	Dhamini Medium Irrigation Project	M/s Shri D.Y. Uppar, and M/s G.Shankar & Anand SM	Dam work	Horizontal Sand Mat <sup>176</sup> (March 2009)	48.81	The work of horizontal sand mat and casing work was to be carried out simultaneously hence, awarded to the same contractor. Reply is not acceptable as in that case the item of work should have been included in the original estimates.
2	Tarli - Major Irrigation Project	M/s Prasad & Co Ltd, SEW Construction Ltd, Hyderabad (Joint Venture)	Dam work	Ring Road (December 2006)	10.71	The existing contractor was ready to execute the work with his own resources hence, to avoid further claims due to stoppage of work, the work was awarded to the same contractor. The reply is not tenable as the type of work awarded was different from the tendered work and could have been awarded after due process of tendering to obtain competitive rates.
3		M/s Prasad & Co (P.W) Ltd	Dam work	Tunnel Work (March 2012)	125.69	This was a technical change and no other work outside the scope of the original work was awarded to the contractor. The reply is not acceptable as the tunnel work was a specialised nature of work and separate bidding was necessary to obtain competitive rates.

<sup>176</sup> The sand mat is in the form of band of 20 meter in width and 60 m on upstream side on each berm and laid continuously on alternate berms on downstream side

Appendix 3.6 (continued)						
1	2	3	4	5	6	7
4	Urmodi Major Irrigation Project	M/s Mulay Brothers Pvt Ltd, Amit (Joint Venture)	Dam work	Irrigation Cum Power Outlet (ICPO) (June 2008)	2.30	The work of ICPO was initially stopped (2000) due to paucity of funds, restarted in 2005 and finally terminated in 2007. The balance work was attached to the contractor executing dam work as the project was included in a time-bound programme. The reply is not acceptable as the work of ICPO should have been tendered separately and then executed.
5		Shri R.B Ghordke	Canal (Ch. 0/0 to 07/00) of Urmodi RBC	Canal Km. Ch. 8/00 to 16/100 of Urmodi RBC	5.81	The attachment of the said work was preferable since the tender was based on old DSR and also due to reduction in the original scope of tender. Reply is not tenable as the canal work was to be executed in a different stretch and accordingly bids should have been invited.
<b>Total (A)</b>				<b>GMIDC</b>	<b>193.32</b>	
1	Nandur Madhameshw ar	M/s Harwins constructions	Earth work, spill-way, guide wall, head regular on Waki river	Rehabilitation works in Korparaon New Gaothan	1.47	Additional works were executed to save time required in tender process. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.
2	-- do --	M/s Mulay Bros	Construction of Bhawali Dam	Construction of gutter along road rehabilitated village Bhawali & Manveda	0.84	Additional works were executed to save time required in tender process. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.
3	Ugilewadi Storage Tank	M/s Pooja Constructions.	Dam work i.e. head works of the storage tank	Bringing casing material for dam from borrow area (0.5 km) ₹ 8.95 lakh and change in grade of concrete from Uncoarse Rubble to Cement Concrete M-15	0.21	Additional works were executed to save time required in tender process. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.

Appendix 3.6 (continued)

1	2	3	4	5	6	7
4	Shivali Storage Tank	M/s Adi Constructions, Osmanabad	Dam work i.e. head works of the storage tank	Construction of alternative road under Shivali and road	0.24	Additional works were executed to save time required in tender process. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.
5	Molwan Storage Tank	M/s Krithi Constructions.	Dam work i.e. head works of the storage tank	Construction of approach road	0.41	Additional works were executed to save time required in tender process. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.
6	Manjra Project	M/s Shraddha & Mahalaxmi (Joint Venture)	Dongargaon Barrage	Submergence bridge	3.99	Additional works were executed to save time required in tender process. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.
7	Manjra Project	M/s Garje Steel Industries Latur	Borgaon-Anjanpur Barrage	Construction of service bridge necessary for M & R of the barrage gates	0.33	Additional works were executed to save time required in tender process. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.
8	Manjra Project	M/s Garje Steel Industries Latur	Borgaon-Anjanpur Barrage	Approach road	0.15	Additional works were executed to save time required in tender process. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.
9	Ravankola Storage Tank	M/s S.D. Constructions.	Dam work i.e. head works of the storage tank	Submergence road	1.25	Additional works were executed to save time required in tender process. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.
10	Deepgaon Storage Tank	M/s Nita Constructions	Deepegaon KTW	Construction of road under submergence	0.25	Additional works were executed to save time required in tender process. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.

Appendix 3.6 (continued)						
1	2	3	4	5	6	7
11	Upper Pravara Project	M/s New Constructions	Asian	Construction of Masonry dam up to a height of 610 m alongwith irrigation & Power outlet of Nilwande-II	Originally only truncated section of masonry dam ( up to 610 m height of dam) for ₹ 35.63 crore was given, later on the Department attached the work of height raising and widening of dam from 610 m to 613m at a cost of ₹ 58.45 crore in May 2000 and further attached the work of height raising up to 652m in December 2003 for ₹ 63.94 crore.	122.39 Due to opposition from PAPs and fund constraints, only truncated section of dam (up to 610 m) was allotted to contractor initially in 1995 and subsequently additional work was allotted. Reply is not tenable as opposition by PAPs and shortage of funds cannot be a reason for partial allotment of work initially and subsequently awarding the full work without tendering.
12	Bhabhal Project	Soma Enterprise Ltd.	Babhhali High Level barrage	Original civil works for ₹ 39.29 crore for barrage was allotted in August 2004 and mechanical works costing ₹ 65.06 crore was allotted in April 2006.	65.06	The mechanical works were inseparable from civil works. Reply is not acceptable as in another project at Vishnupuri, mechanical works of 12 barrages were awarded independently through open tender.
				Total (B)	196.59	KIDC
1	Shirsadi Minor Irrigation Project	Chowgule construction Company	construction of dam	Construction of canals	2.50	The Executive Director of KIDC was competent to award the canal work to the same contractor as additional work. The reply is not acceptable as awarding of work without inviting tender violated the provisions of MPW manual .
2	Korle-Satandi Medium Irrigation Project	Noble Construction Jaipur	India Co.	Construction of dams road	0.38	There was a saving of ₹ 1.28 lakh as a result of executing of the work through sanctioned tender. The reply is not acceptable as the department should have resorted to tendering to obtain competitive rates, as the work was of different nature.

Appendix 3.6 (concld.)

1	2	3	4	5	6	7
3	Nardave Medium Irrigation Project	M/s R. N. Naik and Sons	Construction of dam	Rehabilitation work of land and providing civic amenities	22.45	Rehabilitation works of different villages were allotted to three different contractors. However, remaining rehabilitation works were entrusted to the prime contractor of dam in order to keep progress of both the works. It was also stated that 80 <i>per cent</i> of the rehabilitation work was completed till May 2012 and it was proposed to complete the work and shift the PAPs by December 2013. Reply is not tenable as in that case the Government should have tendered the remaining work to obtain competitive rates.
				Total (C)	25.33	
1	Dhule Medium Project Division	M/s Rana Projects International Ltd	Construction of earthen dam, Akkalpada	Construction of civil amenities at rehabilitation site	4.26	Additional works were allotted without tendering to save time and cost. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.
2	Waghur Dam Division, Jalgaon	M/s A Prabhakar Reddy	Construction of slab culvert	Survey of command area	1.79	Additional works were allotted without tendering to save time and cost. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.
3	Waghur Dam Division, Jalgaon	M/s A Prabhakar Reddy	Constructing of earthen dam	Survey of structure	2.30	Additional works were allotted without tendering to save time and cost. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.
4	Minor Irrigation Division, Jalgaon	M/s Anup singh and sons	Constructing of MI Tank, Sur	Construction of diversion of road	0.97	Additional works were allotted without tendering to save time and cost. Reply is not acceptable as the additional works were incidental to the original works hence, they could have been included in the original estimates.
				Total (D)	9.32	
				Grand Total (A+B+C+D)	424.56	

Name of IDC	Name of project	Nature of work (Name of agency)	Non-recovery/Short-recovery of royalty charges		Government reply (July 2013) and audit remarks	Short-recovery (₹ in crore)
			Audit findings in brief	5		
1	2	3	4			6
MKVDC	Urmodi	Work of Construction of earthen dam with gated spill way across the river Urmodi	Payment for construction of embankment for hearting zone and casing zone <sup>177</sup> involving use of excavated material (54.08 lakh cum) was paid up to June 2012. However, royalty charges amounting to ₹ 3.06 crore was not recovered from the contractor's bills despite non-production of challan towards payment of royalty charges by the contractor.	Royalty charges were included in the estimates and contractors would have quoted higher rates if the royalty charges were not included in the estimates. The reply is not acceptable as royalty charges were already included in the estimates and was recoverable on non-production of challans by contractors.		3.06
		Construction of MI Tank - 2 (M/s Bhaskar Reddy)	The contract price was inclusive of royalty charges. However, despite non-production of challan royalty charges amounting to ₹ 1.06 crore was not recovered.	The royalty charges would be recovered from the payment of extra items to the contractor.		1.06

<sup>177</sup> A zone of impervious earth within a zoned earthen or rockfill dam while casing zone is the outer side of hearting zone placed with pervious soils so as to protect the hearting zone

## Appendix 3.7 (concl'd.)

1	2	3	4	5	6
Uttarmand	Construction of Dam (M/s L V Kunjir)	The contract price was inclusive of royalty charges. However, apart from the payment of contract price inclusive of royalty charges, additional payment of ₹ 72.38 lakh was made on the basis of challan produced resulting in double payment of royalty charges. Therefore, an additional payment of ₹ 72.38 lakh resulted in double payment.	There was no provision in the tender for recovery of royalty charges. Extra item was sanctioned for payment of royalty charges to the contractors. Reply is not acceptable as it was clarified to the contractors in the pre-bid meeting (January 1997) that contractors were to bear the royalty charges and thus, the rate was inclusive of royalty charges.	0.72	
Pimpalgaon Dhale	Canal work (M/s Construction) Canal work (M/s Bhagyashree Construction)	Royalty charges not recovered despite non-production of proof of payment of royalty charges by the contractor.	Royalty charges not recovered despite non-production of proof of payment of royalty charges by the contractor.	0.14 0.28	Recovery would be made from the contractors' bills.
VIDC	Pangra Bandi  (M/s Sanjay Kalbhor and Associates)	Construction of earthen dam, waste weir and head regulator	Recovery of ₹ 54.77 lakh in the fifth running account bill was approved and recorded in measurement book on account of non-production of challan by the contractor in support of payment of royalty charges. However, the bill was paid without recovering the amount, resulting in undue benefit of ₹ 54.77 lakh to the contractor. EE replied (May 2012) that the contractor requested not to recover the royalty charges.	As the contractor was obtaining royalty passes to avoid double payment to the Revenue Authority, his request was accepted in V RA bill. It was stated that the total royalty charges to be recovered up to 7 <sup>th</sup> RA bill (August 2012) was ₹ 97.74 lakh of which ₹ 51.49 lakh was recovered and balance of ₹ 46.25 lakh proposed to be recovered in the 8 <sup>th</sup> RA bill. The reply clearly indicates that financial accommodation was continued to be granted to the contractor by not recovering the royalty charges in time.	0.46 5.72

**h) Maximum live storage shown more than the designed live storage in Water Audit Reports**

Analysis of data based on which Water Audit Report is prepared revealed that in 28 records involving 19 projects, during 2007-12, the maximum live storage (water actually available for use) shown in Water Audit report was more than the designed live storage of the project. The percentage of excess live storage ranged between 101 and 364.

**i) Incorrect balance of water in Water Audit Reports**

On the basis of inflow and outflow, the balance quantum of water was derived and compared with the actual balance shown in the database for the period from 2006-10. Audit observed that out of 1,147 records:

- i) In only 583 records, the balance quantum of water as of 30 June matched with the database figures;
- ii) In 306 records, the balance as of 30 June was shown less than the quantum worked out by audit, as per the database obtained from Maharashtra Water Research and Development Centre; and
- iii) In 214 records, the total outflow of water was more than the total inflow of water. In the remaining 44 records the total outflow was less than total inflow.

<b>Appendix 4.1</b> <i>(Reference: Paragraph 4.2.2; Page 62)</i> <b>Statement showing Category II deficiencies in dams</b>			
<b>Sr. No.</b>	<b>Name of dam</b>	<b>Deficiencies</b>	<b>Remedial measures suggested</b>
1	Paithan dam (Jayakwadi Project)	Longitudinal cracks were observed at Chainage 216 to 217, 228 to 230, 237 to 248	Longitudinal cracks should be excavated up to hearting and filled with murum and sand.
2	Manjara dam	All the drains including drains on both the flanks were not functioning and cross drains and toe drains were deshaped.	Drainage arrangement to be kept effective by periodical cleaning and disturbed pitching of drains to be reset and drains desilted. It was also suggested to clear outfall for drains to avoid pools or stagnant water in the drains and at the toe of the dam and in the river portion.
3	Majalgaon dam.	Leakage was observed in hydropower generation house and scouring observed near the guide wall.	Proper treatment of scouring in rich cement concrete and necessary repairs were suggested.
4	Isapur dam	Out of 18 Piezometers (to measure the total pore pressure), only four were working.	It was suggested to get the Piezometers repaired in consultation with Maharastra Engineering Research Institute (MERI).
5	Siddheswar dam	The crest profile and downstream side bottom width reduced.	Any local damages to masonry on water side face was to be repaired with masonry/concrete filling depending upon the extent of damage.
6	Sina Kolegaon dam	Heavy seepage in gallery and gallery being full of water.	It was suggested to dewater the gallery and find out reasons for seepages and carry out repairs by providing proper treatment.
