Business Architecture for Budget Management System

Pool Budget

Pool Budget - w.e.f. 01-04-2022

A pool budget is an innovative budgetary concept that allows drawing and disbursing officers to have equal opportunity to draw funds from the available budget without bias

The Finance Department allocates a consolidated budget as a pool to the Head of Department/Budget Control Officer (BCO)

The Drawing and Disbursing Officer subordinate to the Budget Control Officer/HoD does not require budget allocation.

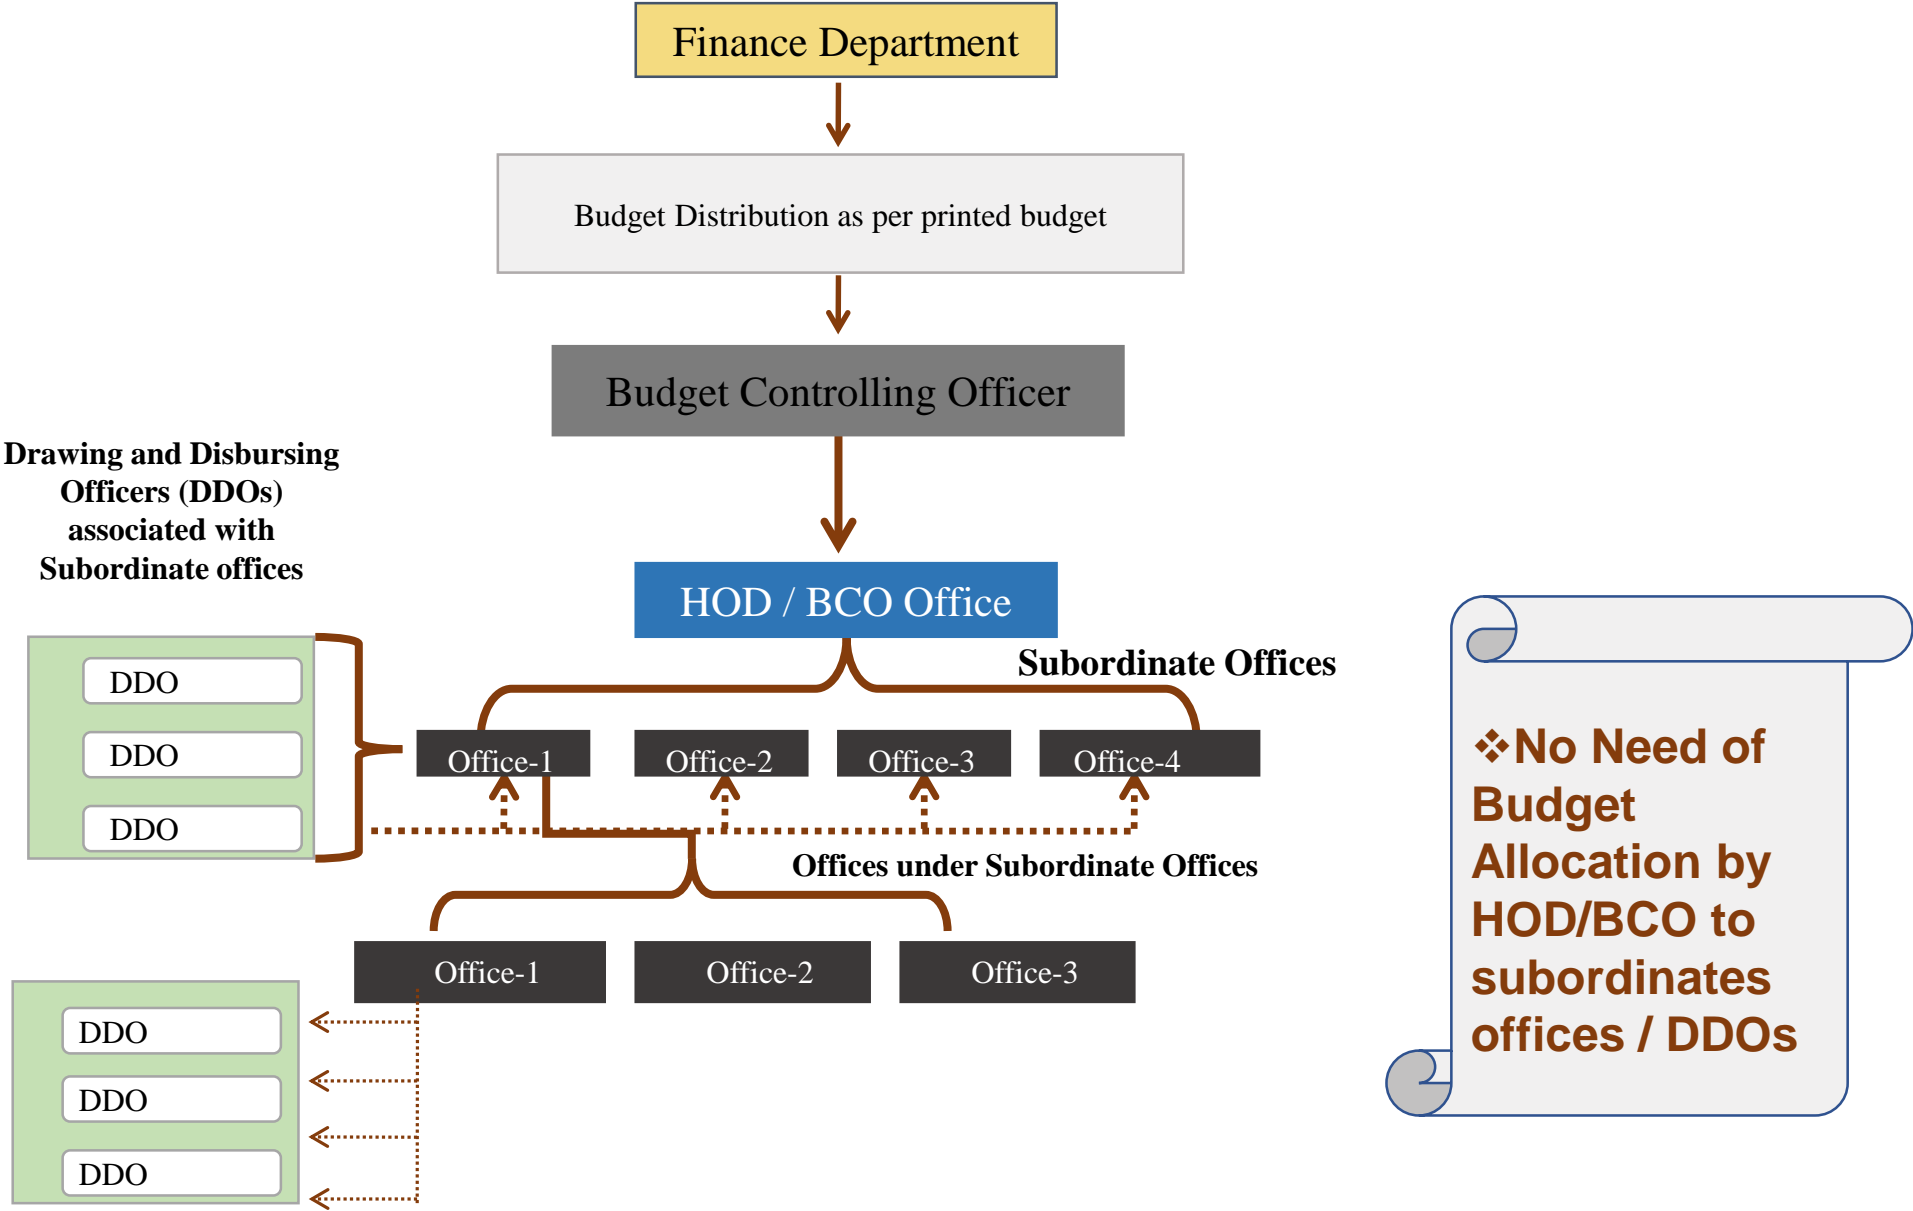

Sanctions, Tools and reports have been created for financial control.

These tools and reports help in controlling the expenditure incurred by the offices under the HoD/BCO.

Major Head-wise, Minor Head-wise, Object Head-wise, Scheme-wise, and Office-wise expenditure reports are available for financial monitoring.

Provision for sending an alarming message at the level of BCO/HoD/FA/DDO from time to time whenever expenditure by drawing disbursing officers exceeds a certain limit.

Online Pool Budget Allocation Process Flow

Benefits – Pool Budget

Way Forward

Plan to associate AI/ML to read scanned documents with bills, start usage of previous expenditure data to control frequency of similar nature of doubtful expenses

01

Saves time and efforts

02

Low rush of transactions in the month of March

03

Divisions / DDOs are able to consume budget if they have completed all financial processes

04

Faster payments

05

No need to wait for limit allocation for Works Divisions

06

Progress of Expenditure is higher even in the first Quarter

07

Bills can be prepared without budget so immediately after receiving funds in the relevant heads, disposal may be ensured

© 2019 BFC. All rights reserved. BFC is a registered trademark of BFC. BFC is a registered trademark of BFC. BFC is a registered trademark of BFC.

Capturing Commitments at the time of BFC

Capturing Outstanding Liabilities

- Departments/DDOs are allowed to prepare bill on IFMS without budget provision
- Bills are cleared by treasury after budget availability
- BFC Format 9 captures the outstanding liabilities from the IFMS
- Departments are not required to fill the outstanding liabilities
- This Process improves the accuracy of Budget Estimates
- Bills are cleared by treasury on FIFO method and is also helpful in cash management of the State

Format 9

प्रपत्र-9

Government of Rajasthan

Rajasthan Government Health Scheme (RGHS)

Use of AI and Data Analytics for reducing unnecessary expenditure and detecting fraud

Introduction to RGHS

- **Launched:** **October 2021**
- **Objective:** Provide cashless OPD, IPD, and pharmacy facilities to government employees/pensioners & families **37 lakh beneficiaries**
- **Facilities:** Government/private hospitals, diagnostic centres, cooperative/private pharma stores empanelled
- **System:** Portal-based for hassle-free cashless benefits
- **Empanelment -** **1718 Hospitals 4854 Pharma stores**
- **Total claims 5.78 crore in 4 years meaning average 40,000 claims per day**

Why there was need for Antifraud Unit in RGHS ?

With more than 44000 claims per day, its almost impossible to track and monitor every claim with an human eye

Problem Statement

- Over the years, RGHS scheme has expanded its coverage, leading to a rise in instances of fraudulent activities, causing significant escalation in scheme expenditure
- Key loopholes have been exploited by various stakeholders, including hospitals, pharmacies, doctors, and beneficiaries.
- Insurance fraud not only results in financial losses but also adversely impacts people's health and well-being.

**Increased claim
amount**

**Extended
Hospitalisation**

**Wrongful
procedure
conducted for
bigger
reimbursement**

**Misdiagnosis
and
unnecessary
treatment**

To address this, Quality Control and Performance Audit Cell (QCPA) , supported by AI/ML technologies, now enables timely anomaly detection in claims, strengthening fraud prevention and ensuring scheme integrity.

Total Claim Amount (Rs. Crore) over 4 years

FY Wise RGHS Claim Submitted Amount (in Cr)

Why there was need for Antifraud Unit in RGHS

Duplicate and Frequent Claims

Multiple instances of the same package claimed by a single patient within restricted periods (e.g., multiple stent removals within a month)

Suspicious Hospital Patterns

Hospitals appear to overuse specific packages, with some applying the same procedures to over 90% of patients. This red flags of potential systematic fraud.

Overlapping Admissions and Unusual Travel Patterns

Cases where patients were admitted to multiple hospitals on the same dates or travelled between districts shortly after major surgeries indicate possible exploitation of the system.

OPD to IPD Conversions

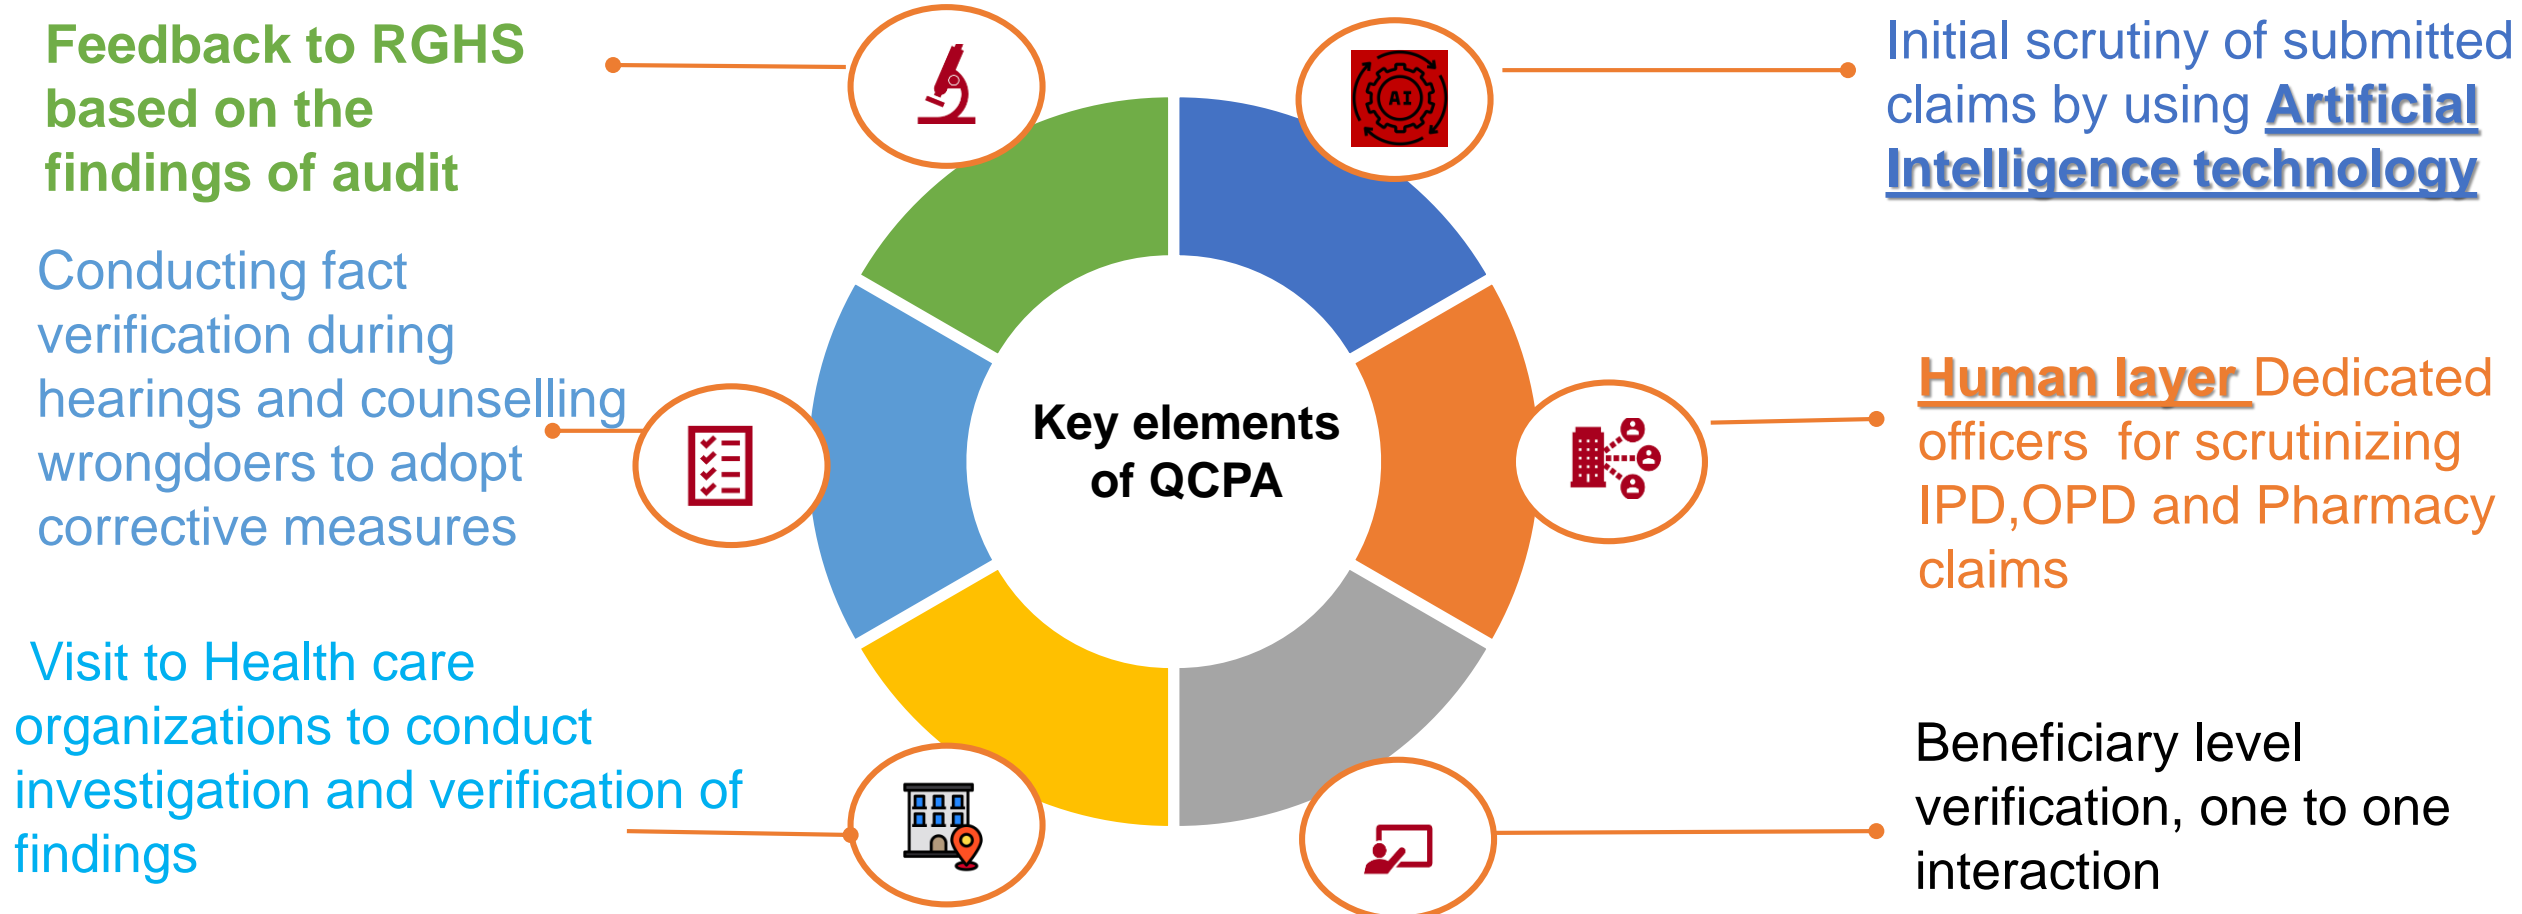

Several outpatient treatments were improperly billed as inpatient, increasing costs without medical justification.

Rajasthan Social and Performance Audit Authority

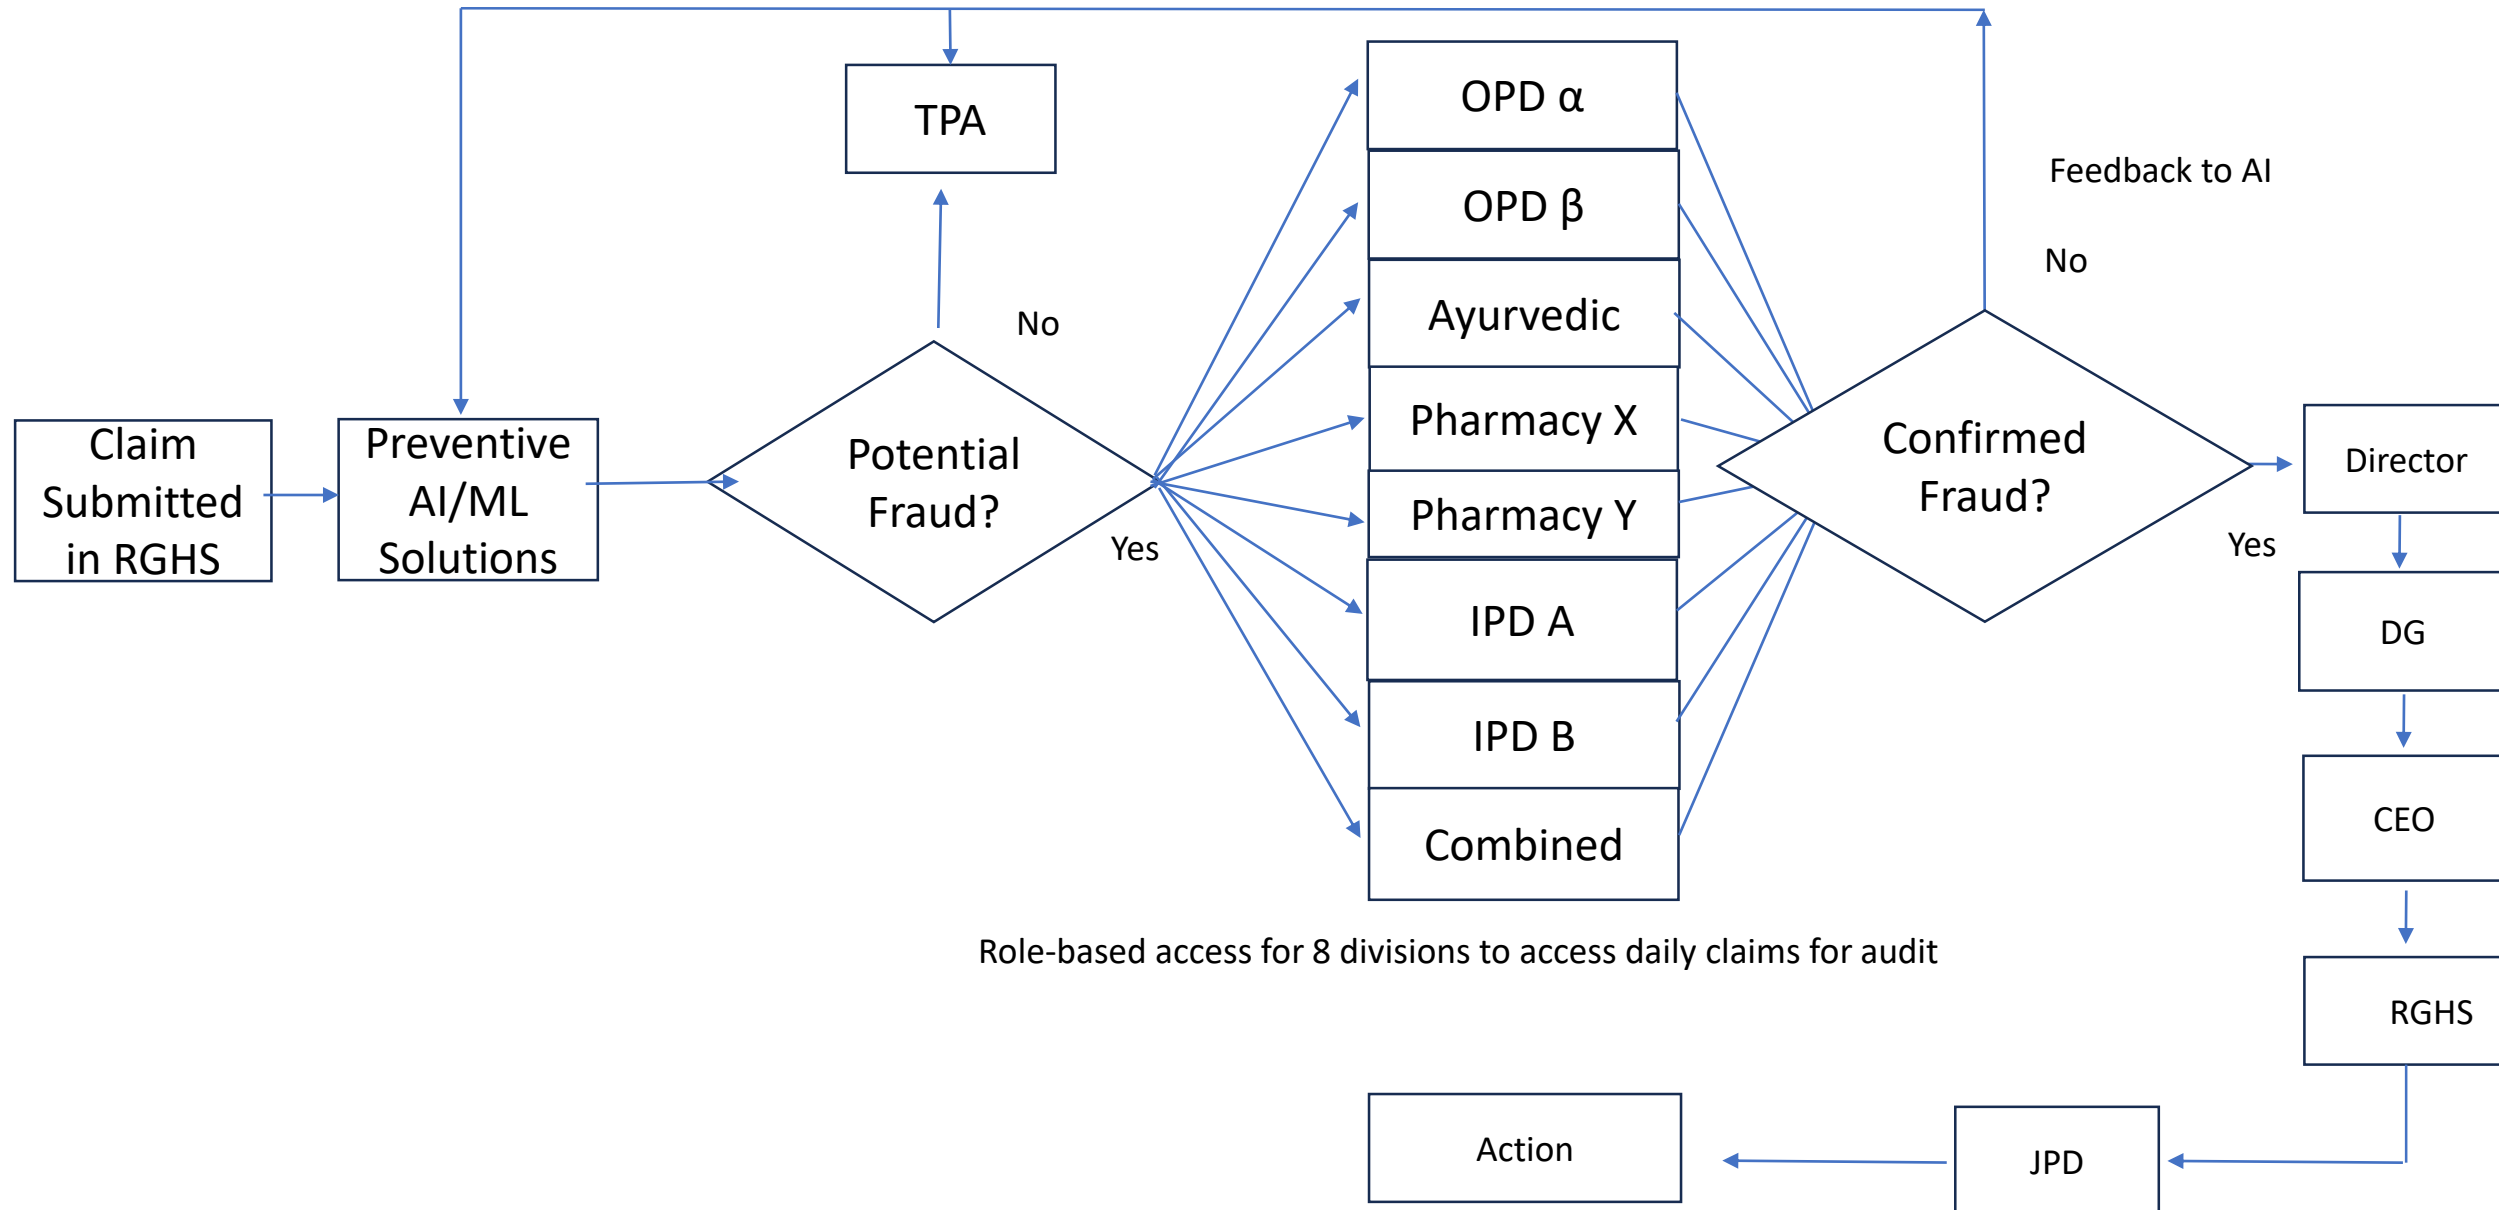

Objective		RSPAA's primary aim is to build and strengthen the Social and Performance Audit mechanism in Rajasthan
Core Role		Conducts in-depth reviews of operational efficiency and effectiveness of government units, strategies, projects, and activities to ensure proper management of public funds
Consultancy Support		Provides expert consultancy in strategic planning and implementation of government schemes, working in collaboration with the Department of Finance and Planning
Principles		Functions on the pillars of accountability, transparency, and community participation in all its audit and evaluation activities
Evaluation Scope		Executes surveys, rapid assessments, and detailed audits to identify underachieved targets, design and implementation deficiencies, and offers targeted recommendations for improvement

Quality Control and Performance Audit Cell

- Under Rajasthan Social and Performance Audit Authority(RSPAA) **QCPA** was established to curb leakages and pilferage within the RGHS scheme.
- The QCPA analyzes both structured and unstructured data from the RGHS portal using Artificial Intelligence, and QCPA officers conducts checks of claims to confirm fraud

QCPA workflow – Complete online nothing paper

AI/ML-Based Fraud and Abuse Detection for RGHS

AI triggers
IPD/OPD/Pharmacy

01

Phantom Billing Detection:
Compares billed services with patient records

02

Duplicate Document Detection: Flags repeated use of documents across claims.

03

Forgery Detection: Identifies altered or tampered scanned documents.

04

Missing Document Alerts: Flags when mandatory diagnostics reports are missing

05

Report-Treatment Validation:
Compares diagnostics (high end radiological investigation without primary investigation)

06

Historical Abuse Detection: Flags treatments like multiple cataract surgeries for the same patient.

07

Clinical Compatibility Check: Flags illogical treatment combinations. Length of stay

08

Face detection :
Analyse facial feature highlights mismatch, similarity

Quality Control and Performance Audit Cell

Month wise number of AI triggers deployed (Cumulative)

AI and Data Analytics Integration with Human Expertise

- Establishment of Quality Control and Performance Audit Cell (QCPA) with expertise from AI/IT/Medical/Insurance fields
- Created under RSPAA for auditing and fraud detection and clear mandate
- Deployment of AI capabilities through a private agency
- AI identified suspicious claims for further scrutiny through documents verification
- AI system flags doubtful claims in real-time
- Manual intervention team formed: doctors, pharmacists, IT experts, insurance experts
- Detailed investigation of flagged cases to detect fraudulent activities

Results Achieved

- Suspension of the Hospitals and Pharma Stores and then hearing to take final decision
- Suspension of the "involved" employees' RGHS Cards & strict Disciplinary action against those employees who deliberately created false bills to claim amount.
- Recovery of 3 times penalty with actual paid amount
- De-empanelment of the facilities from the scheme
- Legal action against erring hospitals, diagnostic centres and pharma stores
- Rs. 25 Crores recovered within 3 months and 15 crore under recovery till July25
- Expenditure reduced average 50 crore monthly from peak months without QCPA
- Enhanced monitoring and control of the RGHS scheme expenditure
- Deterrent for those who were misusing the loopholes

Thank You
